ENV200H: Assessing Global Change: Science and the Environment
Winter 2019

Last Updated: December 12, 2018

Time: Tuesdays and Thursdays, 11:00 – 12:00 pm
Location: MS 2158 – Medical Science Auditorium
Tutorials: Each student will attend four tutorials each semester. The tutorial schedule can be found alongside the lecture and reading schedule later in this syllabus.

Instructor: Karen Ing, Associate Professor, Teaching Stream, School of the Environment; ES2098, 416-978-4863; karen.ing@utoronto.ca

Teaching Assistants:
Mark Horsburgh (Head TA): mark.horsburgh@utoronto.ca
Serra Buchanan serrawillow.buchanan@mail.utoronto.ca
Marissa Davies marissa.davies@mail.utoronto.ca
Susan Frye s.frye@mail.utoronto.ca
Elizabeth Phillips Elizabeth.phillips@mail.utoronto.ca
Jasmine Williams jasmine.williams@mail.utoronto.ca

Course website: Quercus

Office Hours: by appointment. But will usually be available for questions immediately following class outside the lecture room.

Course Subject

Global environmental change, such as climate change, loss of species diversity, land transformation, and resource overexploitation, are daunting challenges currently confronting humanity. These changes are primarily precipitated by anthropogenic activities which are impacting the planet’s ability to self regulate or persist. To better address these challenges we need to assess and understand the magnitude and consequences of these changes through a systematic acquisition of knowledge.

It is from this basis that ENV200 was designed. ENV200H is a course about science and what it means to study something from a scientific perspective. ENV200H is also a course about the environment. Taken together, environmental science means using scientific protocols, i.e. seeking valid, generalizable knowledge, to further our understanding of the natural world as well as acquiring knowledge about our impacts on that world.

This course is therefore designed to meet the following educational objectives.

Educational objectives
- an understanding/appreciation of how science helps us understand our world and can assist in refining a life-long environmental ethic
- recognition and understanding of the impacts of the changing global environment, e.g. increasing atmospheric CO₂, alterations to hydrologic cycle, species diversity loss, and land transformation.
- recognition people as part of ecosystems rather than a part from ecosystems
- Ability to think critically to evaluate sources of information for scientific credibility to enable students to assess the degree of future environmental perturbations

**Tutorials**
Mastering complex knowledge from outside your own discipline, as students are being asked to do in this science distribution course, is very challenging. Therefore four tutorials have been incorporated into the course structure as a forum in which students will work to further their understanding and application of the role of science in environmental science using four different exercises.

- Tutorial 1 - Science in the media (week of Jan 22nd)
- Tutorial 2 - Tragedy of the Commons (week of Feb 5th)
- Tutorial 3 – Biodiversity (week of Mar 7th)
- Tutorial 4 - Natural capital (week of Mar 21st)

Each tutorial is designed to illustrate a specific concept that is relevant to the course. Attendance is required and there is an assignment associated with each tutorial. The hard copy of the assignment is due in tutorial. Each assignment is worth 7.5%. Please note that tutorial assignments will NOT be accepted unless the accompanying tutorial is attended. In addition, there is an additional 5% for overall participation. Students can only attend and get credit for attending the tutorial section in which they are formally registered and assigned, unless permission is granted beforehand by the head TA.

The tutorial assignments are designed to guide students through the process of how to critically approach and analyze new sources of information. Readings are assigned within each tutorial, chosen to illustrate specific relevant concepts. The associated assignments are usually designed to evaluate the students’ ability to process new information. Therefore though the answers to the worksheet questions are embedded in the assigned readings, students are expected to generate a response in their own words and not simply cut and paste the response from the assigned reading.

Copying the response from the reading does not demonstrate understanding of the concept. Instead we are looking for the student to construct a response based on their understanding of the reading. Equally important is that copying text word for word is a violation of the University’s Academic Code of Behaviour, as described in more detail below which clearly identifies that it is unacceptable to submit work for credit by copying material word-for-word from a source.

It is also unacceptable in these assignments to respond to the questions by simply putting source text in quotations and citing the original article. Simply extracting the answer from the source text word for word does not represent any processing of the new material.
Though this may at first seem a difficult task since the source document has provided the answer, this is a skill students should develop since it then clearly demonstrates student understands the concepts and is able to express them in their own words.

Tutorials are held on the weeks noted on the lecture & tutorial schedule below. They begin on the week of January 22nd. Most of you will have already registered for a tutorial section, i.e. a particular day and time. However, there could be four tutorial groups meeting during this time slot (at different locations with different TAs). You can find out where your particular tutorial meets (and the identity of your TA) shortly after we reach the last date to add a class (after Jan 20th, and this information will be posted on the course Quercus site.

**Required Text:**

There is no required hardcopy textbook for ENV200H. Instead resources will be drawn from a variety of open sources, and links to any relevant readings will be posted prior to each associated lecture. However a backbone to the course materials are the units drawn from The Habitable Planet website developed by the Annenberg Learner in 2007 (http://www.learner.org/courses/envsci/index.html). These readings will appear in the lecture & reading schedule simply identified by their Unit # and title.

**Marking Scheme**

<table>

**COURSE POLICIES**

**Lectures**
Lecture content is the intellectual property of the course instructor. It is prohibited to redistribute/post any part of the lecture postings, or audio-/videotape lectures without permission from the course instructor.

**Tutorials**
All tutorial assignments are due **in tutorial** and cannot be submitted without accompanying tutorial attendance.

The only exception will be for cases of illness which can be confirmed with a completed UofT Illness Verification form.

**Midterm**
For students who miss the regularly scheduled midterm on February 14th, 2019, the head TA must be notified within 48 hours and a completed University of Toronto Illness Verification
Form must be presented within a week before any special consideration (such as a deferred midterm) will be considered.

**Graded Material**
Any disputes or questions on graded material must be brought to the attention of the TA or instructor within 2 weeks of return or posting, otherwise will be considered final.

**Accessibility Needs**
The University of Toronto is committed to accessibility. If you require accommodations for a disability, or have any accessibility concerns about the course, the classroom or course materials, please contact Accessibility Services as soon as possible: disability.services@utoronto.ca or http://studentlife.utoronto.ca/accessibility.

**Academic Integrity**
The following is taken from the Faculty of Arts and Science Academic Integrity website (http://www.artsci.utoronto.ca/osai/students):

Academic integrity is fundamental to learning and scholarship at the University of Toronto. Participating honestly, respectfully, responsibly, and fairly in this academic community ensures that the U of T degree that you earn will be valued as a true indication of your individual academic achievement, and will continue to receive the respect and recognition it deserves.

Familiarize yourself with the University of Toronto’s Code of Behaviour on Academic Matters (http://www.governingcouncil.utoronto.ca/policies/behaveac.htm). It is the rule book for academic behaviour at the U of T, and you are expected to know the rules. Potential offences include, but are not limited to:

- Using someone else’s ideas or words without appropriate acknowledgement.
- Copying material word-for-word from a source (including lecture and study group notes) and not placing the words within quotation marks.
- Submitting your own work in more than one course without the permission of the instructor.
- Making up sources or facts.
- Including references to sources that you did not use.
- Obtaining or providing unauthorized assistance on any assignment including
  - working in groups on assignments that are supposed to be individual work,
  - having someone rewrite or add material to your work while “editing”.
- Lending your work to a classmate who submits it as his/her own without your permission.

On tests and exams:
• Using or possessing any unauthorized aid, including a cell phone.
• Looking at someone else’s answers
• Letting someone else look at your answers.
• Misrepresenting your identity.
• Submitting an altered test for re-grading.

Misrepresentation:
• Falsifying or altering any documentation required by the University, including doctor’s notes.
• Falsifying institutional documents or grades.

The University of Toronto treats cases of academic misconduct very seriously. All suspected cases of academic dishonesty will be investigated following the procedures outlined in the Code. The consequences for academic misconduct can be severe, including a failure in the course and a notation on your transcript. If you have any questions about what is or is not permitted in this course, please do not hesitate to contact me. If you have questions about appropriate research and citation methods, seek out additional information from me, or from other available campus resources like the U of T Writing Website. If you are experiencing personal challenges that are having an impact on your academic work, please speak to me or seek the advice of your college registrar.

### Important Dates

- Jan 7 – start of term
- Jan 20 - last day to add or make section changes to S section code courses
- Feb 18 – Family Day
- Feb 18-22 – Reading Week
- Mar 17 - last day to cancel S section code courses without academic penalty; last day to add or remove a **CR/NCR option** for S section code courses
- Apr 5 – classes end
- Apr 6-30 – exam period
